AutoCAD is a component-based, three-dimensional (3D) CAD system that provides 2D drafting and design capabilities. AutoCAD models are made of components and can be edited by non-designers. Components can be further divided into groups (blocks), and can be freely merged, moved or split. This gives the user the ability to create assemblies of components in any order. As the latest version of AutoCAD, AutoCAD 2020 is intended to provide users with improved speed, ease of use, and overall productivity. The platform now runs on Windows, macOS, and Linux operating systems, and is used in automotive, aerospace, architectural, engineering, and manufacturing. History of AutoCAD

AutoCAD was originally developed by John Walker, a programmer with an interest in electronic drafting. In 1982, he designed a draft preparation program, based on his study of punched-paper drafting at Cornell University, where Walker earned his bachelor's degree in electrical engineering in 1975. The program was first publicly released as version 1.0 in December 1982 on a Macintosh 604 mainframe and was marketed as a desktop drafting system. It quickly caught the attention of the first wave of computer-aided drafting (CAD) users in industry. That same year, versions 2.0 and 2.1 were released on the Apple II, and version 2.2 was released on the IBM PC. The version 2.2 release brought the ability to read and write AutoCAD data files on the PC, as well as many new features, such as a native command-line interface, a user-defined commands environment and the ability to draw two-dimensional (2D) drawings directly in 3D space. Version 2.3 of AutoCAD for the PC, released in 1987, was the first major upgrade to the 2D drafting features of AutoCAD since the release of AutoCAD 1.0. During the same time period, the company also released AutoCAD Map 2.0, the first version of AutoCAD's 3D drafting tools. AutoCAD was first released for the Macintosh in September 1984 with a version 1.1 release. That same year, the first release of AutoCAD for the IBM PC was done in partnership with a company named 3D Systems. This version of the product used an earlier version of the products' source code, and required an installation of 3D Studio Systems 3D Studio, an

The aim of the study was to assess the factors influencing the choice of the operation type in patients with inguinal hernia. To establish the factors influencing the choice of the operation type for the treatment of inguinal hernia the questionnaires were sent to 1304 patients. A total of 116 patients responded to the questionnaires. The most frequent indication for the operation was a longstanding history of the inguinal hernia. The choice of the operation depended mainly on the surgeon's experience and his past operative experience. The hernias in the upper part of the inguinal canal were operated less frequently in comparison with the hernias in the
